linkedin.com/in/saheedat-abbas | www.thesaheedat.com

PROFESSIONAL SUMMARY

Data Scientist and Analytics Professional with 8+ years of experience in Python and SQL-based data analysis, statistical modeling, and machine learning. Currently building applied AI capabilities through an MS in Information Systems & Technology and a Certified AI Specialist designation, with advanced coursework in NLP, Neural Networks, ML Engineering, and MLOps. Proven expertise in data preprocessing, predictive modeling, and delivering analytics solutions in banking and enterprise environments. Developing hands-on experience with Large Language Models (LLMs), RAG architectures, and AI governance including peer-reviewed publication in generative AI governance.

Strong ability to translate complex analytical findings into actionable business solutions, with growing interest in applied research and industry-academic collaboration.

PUBLICATIONS

Abbas, S. O., Jain, K., Melford, A. N., Vankdoth, S. K. N., Abbas, A. O., & Umah, E. (2026). Governance models for safe deployment and fine-tuning of generative AI in enterprise security and data protection. *Journal of Engineering Research and Reports, 28*(1), 100–115. https://doi.org/10.9734/jerr/2026/v28i11761

CORE COMPETENCIES

- **Python Programming:** 8+ years of data analysis, modeling, scripting, machine learning implementations, API development, and automation
- **SQL & Data Manipulation:** 8+ years of complex querying, data transformation, database optimization, and multi-source data integration
- **Data Preprocessing & Feature Engineering:** 5+ years cleaning, transforming, and preparing datasets for machine learning and analytics
- **Machine Learning & AI:** Advanced coursework in NLP, Neural Networks, ML Engineering, MLOps; practical experience with classification, clustering, predictive modeling
- **Large Language Models (LLMs):** Theoretical understanding and practical application of LLMs, RAG architectures, prompt engineering, and Agentic AI frameworks
- **Cloud & AI Tools:** Experience with cloud platforms, AI-powered analytics tools including Copilot, Microsoft Fabric, Power Automate
- **Banking & Financial Services:** Deep domain expertise with 10+ years in banking operations, risk analysis, and financial data analytics

PROFESSIONAL EXPERIENCE

Data Analyst – Workforce Planning & Analytics | NAV CANADA, Ottawa, ON

January 2024 – Present

- Develop and maintain Python scripts for data cleaning, preprocessing, forecasting models, and API-based automation supporting advanced analytics and AI initiatives across the organization
- Design and implement complex SQL queries for multi-source data integration, creating data pipelines that consolidate workforce data from disparate systems for comprehensive analysis

- Apply statistical analysis and predictive modeling techniques to workforce data, utilizing Python libraries (pandas, NumPy, scikit-learn) to identify trends and generate actionable insights
- Build logical and physical data models including multidimensional data cubes and metadata definitions, ensuring data quality and consistency for analytics platforms
- Leverage AI-powered tools including Microsoft Copilot for enhanced productivity in data analysis, report generation, and insight summarization
- Lead sophisticated analysis initiatives, drawing on diverse data sources and advanced analytical methods, communicating findings to technical and non-technical stakeholders with minimal supervision.

Business Analyst – Data & Analytics | INNOVATION Federal Credit Union, Ottawa, ON

August 2022 – April 2024

- Automated data collection and preprocessing pipelines using Python, implementing ETL processes to capture and transform data from multiple sources into SQL-based analytical environments
- Developed advanced SQL queries and stored procedures for data manipulation, aggregation, and reporting, optimizing query performance for large-scale financial datasets
- Created data preprocessing workflows ensuring data quality, handling missing values, outlier detection, and feature engineering for analytics and reporting solutions
- Designed and implemented data governance frameworks ensuring data privacy, security standards, and regulatory compliance across all analytics initiatives
- Collaborated with cross-functional teams to translate business requirements into technical data solutions, ensuring alignment with organizational objectives and banking regulations

Analyst, Client & Process Analytics | CIBC, Ottawa, ON *May 2022 – Aug.2022*

- Delivered data-driven insights to support client experience and process improvement initiatives within a fast-paced banking environment
- Analyzed client behavioral data and process performance metrics to identify trends and inform strategic decision-making
- Collaborated with cross-functional teams to translate analytical findings into actionable recommendations aligned with CIBC's client-focused mandate
- Supported analytics workflows contributing to operational excellence and continuous improvement across business processes

Financial Analyst | Scotiabank, Ottawa, ON January 2019 – October 2021

- Analyzed client behavioral data and product performance metrics using SQL and Excel, creating predictive models for financial recommendations and risk assessment
- Participated in pilot programs integrating machine learning-based credit and risk scoring solutions, providing analytical feedback on model performance and business impact
- Supported digital transformation initiatives by analyzing adoption patterns and engagement metrics, contributing to 40% increase in digital banking usage
- Conducted risk and suitability assessments using data-driven methodologies, ensuring compliance with banking regulations and security standards

Senior Business Analyst | Diamond Bank Plc, Lagos, Nigeria Sept. 2013 – Dec. 2018

- Led data analysis for enterprise banking system implementations (Flexcube, TSS), performing data profiling, quality assessment, and migration validation
- Utilized SQL for production data analysis, query optimization, and database performance tuning across large-scale transactional systems
- Performed root cause analysis on production issues using Jira and SQL-based log analysis, identifying patterns and providing data-driven insights to development teams

- Developed process documentation and technical specifications for banking applications, ensuring data integrity and security compliance throughout implementation lifecycle

TEACHING & LEADERSHIP

Adjunct Professor – Analytics | Lambton College, ON Sept. 2024 – Present

- Teach Business Process Modelling and Analytics, translating complex technical concepts into accessible learning materials for students from diverse backgrounds
- Mentor students on Python, data analysis, and analytical problem-solving, preparing them for careers in data science and analytics

EDUCATION & CERTIFICATIONS

- **MS in Information Systems & Technology (In Progress)** | University of Michigan
- **Certified Artificial Intelligence Specialist (In Progress)** | United States Artificial Intelligence Institute - Advanced Coursework: NLP & Neural Networks, Advanced ML Engineering, MLOps, Cloud & Network Infrastructure, AI/ML Systems Design
- **Master of Business Administration (MBA)** | Carleton University 2024
- **Graduate Certificate in Business Analysis** | Mohawk College 2022
- **Diploma in Big Data & Analytics** | Toronto School of Management 2022

TECHNICAL SKILLS & TOOLS

- **Programming Languages:** Python (pandas, NumPy, scikit-learn, TensorFlow basics), SQL (PostgreSQL, SQL Server, MySQL), R
- **Data Science & ML:** Statistical analysis, predictive modeling, classification, clustering, regression, feature engineering, data preprocessing
- **AI & NLP:** Large Language Models (LLMs), RAG architectures, Agentic AI frameworks, NLU/NLG techniques, prompt engineering
- **Analytics & BI Tools:** Power BI, Tableau, Excel (advanced), Microsoft Fabric, Copilot
- **Cloud & Infrastructure:** Experience with cloud computing environments (Azure, Microsoft Cloud), API development, ETL/ELT pipelines
- **Version Control & Collaboration:** Git, Jira, Agile methodologies

KEY PROJECTS & ACHIEVEMENTS

- **Parkinson's Disease Classification:** Developed ML classification models using Python and metabolic data, implementing preprocessing pipelines, feature selection, and model evaluation achieving high accuracy in disease prediction
- **RAG Document Indexing System:** Built a Retrieval-Augmented Generation pipeline using Python, FastAPI, TF-IDF retrieval, and the Anthropic Claude API for context-aware document querying
- **Advanced Data Mining Implementations:** Executed complex ML projects including K-means, DBSCAN, hierarchical clustering, decision trees, random forests, neural networks, and association rule mining using Python and R
- **Banking System Data Migration:** Led data preprocessing, transformation, and quality validation for enterprise banking system migrations (Flexcube, TSS), ensuring data integrity, security compliance, and zero-defect cutover.
